

Upverter / Build Something Design contest

Upverter and Build Something team up for a circuit design contest. Get ready!

Design an awesome and functional schematic + circuit board layout, submit it via Twitter and the Build Something Hackathon jury will review all the submissions.

The prize for the winner is \$250 and 10 prototypes will be manufactured.

How does this work?

1 - Create a free open-source Upverter account. Choose a template, start a design from scratch or fork one other user's design.

2 - Draw the schematics AND the circuit board.

3 – Submit your designs:

- Tweet the URL of your Upverter design @Upverter and @Buildsomething1 using the hashtag #hwdesigncontest. Your tweet should then be like:

<http://ow.ly/ntO7j> @Upverter @Buildsomething1 #hwdesigncontest

OR

- If you don't have a Tweeter account, you can submit your design by email at support@upverter.com with the #hwdesigncontest hashtag in the subject line

4 – The best designer wins 250\$ cash and will receive 10 of his boards at home within 14 days.

For any questions please contact Upverter of Build Something on Tweeter or through the support email using the #hwdesigncontest hashtag.

Good Luck!
